

Tanzania Program Highlights

Cervical cancer is the number one cancer killer of women in sub-Saharan Africa (SSA), with roughly 100,000 women diagnosed annually; of these women, about 62% will die from the disease. Women living with HIV (WLHIV) are up to five times more likely to develop persistent precancerous lesions and progress to cervical cancer, often with more aggressive form and higher mortality.

Launched in May 2018 to address this challenge, Go Further is an innovative public-private partnership between the U.S. President's Emergency Plan for AIDS Relief (PEPFAR), the George W. Bush Institute, the Joint United Nations Programme on HIV/AIDS (UNAIDS), and Merck. The partnership collaborates closely with governments to strategize on ways to provide services for women from prevention through the cancer journey. Go Further began working in eight countries (Botswana, Eswatini, Lesotho, Malawi, Mozambique, Namibia, Zambia, and Zimbabwe), and will expand services to four additional countries (Ethiopia, Kenya, Tanzania, Uganda) in fiscal year (FY) 2021. The objectives are to screen all WLHIV on ART between the ages of 25 and 49 for cervical cancer, and to treat pre-invasive cervical cancer lesions to prevent progression to cervical cancer.

Tanzania	Funding Amount	WLHIV on Treatment*	Cervical Cancer Screening Target
FY21	\$2,000,000	546,015	308,637

*This is women aged 25-49 on treatment at the end of FY19.

RESULTS SUMMARY

- ◆ In FY20: 85% of women who screened positive for precancerous lesions were treated.
- ◆ Since FY18: 2,529 women have screened positive for suspected invasive cervical cancer. Of the 230,362 screenings, 200,701 (87.1%) were first time screenings, 2,526 (1.1%) were follow-up screenings, and 27,135 (11.8%) were re-screens.

Cervical Cancer Cascade

of Cervical Cancer Screenings

Strategic Direction for FY21

- ◆ All clinical partners will integrate cervical cancer screening for WLHIV into routine HIV treatment services. A “screen-and-treat” approach will be implemented for the management of precancerous lesions to maximize opportunities for immediate cryotherapy treatment.
- ◆ PEPFAR Tanzania’s IPs will implement visual inspection with 5% acetic acid (VIA) as a single-visit ‘point-of-care’ clinical screening for early detection of cervical cancer and clients will be managed using cryotherapy treatment and excisional treatment approaches such as LEEP for cryotherapy ineligible lesions.
- ◆ Funds will also support equipment upkeep, sample transportation systems and will support information, education and communication efforts and awareness raising in collaboration with the Ministry of Health, Community Development, Gender Elderly and Children.

Implementing Partners (FY20)

- ◆ Henry M. Jackson Foundation
- ◆ Ariel Glaser Pediatric AIDS Healthcare Initiative
- ◆ AMREF Health Africa HQ
- ◆ Management and Development for Health
- ◆ Elizabeth Glaser Pediatric AIDS Foundation
- ◆ Deloitte Consulting Limited
